

Dear Parents, Guardians and Staff:

The Lyndon Play and Learn Center practices Integrated Pest Management, a program that combines preventative techniques, non-chemical pest control methods, and the appropriate use of pesticides with a preference for products that are the least harmful to human health and the environment. Applications of pesticides are made only when deemed necessary to control a pest problem and after trying other means to control the problem. The term “pesticide” includes insecticides, herbicides, rodenticides and fungicides.

We are establishing a registry of people who wish to be notified prior to pesticide application. To be included in this registry, please complete the attached form and return it to the Lyndon Play and Learn Center’s business office.

-----

Please include me in the pesticide application notification registry. I understand that if there is an immediate threat to health or property that requires treatment before notification can be sent out, I will receive notification as soon as practicable.
